Week 4 Rubric: How Your Worksheets Are Marked

Session 1: Smart Contracts for Business - and How to Read One
Session 2: Choosing a Chain: a Five-Criterion Decision Framework

IT8204 Blockchain and Cryptocurrency | Assessment 2 (A2), the weekly worksheets | Worth 2.50 percent of the course | Deadline for both worksheets: Friday 9 October 2026, 23:59

How your mark is worked out

- Your two Week 4 worksheets are marked together, on the eight criteria in this rubric.
- Each criterion gets a score from 0 to 5. Decimal scores are allowed, for example 3.5.
- Each criterion has a weight. The eight weights add up to 100.
- Your mark for one criterion is the score divided by 5, times the weight. For example, a score of 4 on a criterion weighted 13 gives 4 divided by 5, times 13 = 10.4 marks.
- Your Week 4 mark is the total of the eight, out of 100. It counts for 2.50 percent of the course, inside your A2 total. The course result is decided on your overall course mark.

What each score means

Score	Level	What it means
0	Missing	No evidence / not attempted.
1	Limited	Attempted but cannot give a basic explanation; mostly incorrect.
2	Basic	Below expectation; major gaps.
3	Reasonable	Meets the task; major enhancement still possible.
4	Very Good	Minor enhancement only; valid and well justified.
5	Excellent	Fully meets the task + critical insight / self-reflection.

A 4 sits between the 'Reasonable (3)' and 'Excellent (5)' descriptions below. A 0 means there is no evidence for that criterion.

The eight criteria

C1. Session 1, Task 2 - your individual build task (weight 13)

What is marked	Session 1 worksheet, Task 2: for the contract you read on Etherscan, its oracle dependency (the outside data it relies on) and ONE mitigation.
Excellent (5)	Names the specific outside data the contract relies on and explains what goes wrong if that data is wrong or late. Gives ONE concrete control that reduces that risk.
Reasonable (3)	Names an oracle dependency and a mitigation, but one of them is vague, such as 'use a good oracle', or the risk is not explained.
Limited or Basic (1-2)	No specific dependency is named, or the mitigation has nothing to do with outside data.

C2. Session 2, Task 2 - your individual build task (weight 13)

What is marked	Session 2 worksheet, Task 2: the five-criterion grid for ONE chain of your choice (Ethereum with a layer 2, Hyperledger Fabric, Solana or Corda).
Excellent (5)	All five rows are completed, one line each. Every line makes a specific and accurate point about the chosen chain.
Reasonable (3)	All five rows are completed, but some lines are general and would fit any chain.
Limited or Basic (1-2)	Rows are missing, or points are wrong about the chosen chain.

C3. Session 1, Task 3 - your own write-up of the group activity (weight 13)

What is marked	Session 1 worksheet, Task 3: translate a deployed Uniswap or Compound contract into business language.
Excellent (5)	Lists the main functions by name and turns each into a plain business step. Names the oracle dependency and one mitigation. A manager could follow it.
Reasonable (3)	Main functions are listed and partly translated, but some stay technical, or the oracle point is missing or thin.
Limited or Basic (1-2)	Function names are copied without translation, or the contract is described only in general terms.

BAHRAIN POLYTECHNIC بوليتكنك البحرين

C4. Session 2, Task 3 - your own write-up of the group activity (weight 13)

What is marked	Session 2 worksheet, Task 3: match three use cases to fit-for-purpose chains. They are a Bahraini small-business trade-finance escrow, a Bahraini dinar to Pakistani rupee money transfer, and a regional carbon-credit registry.
Excellent (5)	All three are matched using the five criteria. Each match names the one criterion that decided it and says why it outweighs the others.
Reasonable (3)	All three are matched to sensible chains, but the deciding criterion is missing or unexplained for one or more.
Limited or Basic (1-2)	Matches are missing, or chains are chosen by name or popularity with no criteria used.

C5. Task 1 in both worksheets - the reading questions (weight 16)

What is marked	Task 1 in both worksheets. Session 1 asks what a smart contract can do, about the oracle problem, and about escrow risk. Session 2 asks about the deciding criterion, Schar's five layers, and a chain shortlist for the dinar to rupee transfer.
Excellent (5)	Every question is answered in two or three sentences, in your own words. Each answer is correct and explains why, not only what.
Reasonable (3)	All questions are answered and broadly correct. Some answers are one line, repeat the reading, or skip the reason.
Limited or Basic (1-2)	Several questions are missing or wrong, or the answers are copied from the reading.

C6. Analysis and judgement across the week (weight 14)

What is marked	Across the week: judging chains and contracts by criteria rather than by reputation.
Excellent (5)	Makes and defends choices. It says which criterion decides, why it outweighs the others, and what the choice gives up.
Reasonable (3)	Some judgement is shown, but the answers mostly describe, or reasons are stated without support.
Limited or Basic (1-2)	Description only, or opinions given with no reasons.

BAHRAIN POLYTECHNIC بوليتكنك البحرين

C7. Bahrain and Gulf Cooperation Council (GCC) grounding (weight 10)

What is marked	Across the week: the Bahraini use cases in the tasks.
Excellent (5)	Uses the Bahraini cases accurately, such as the dinar to rupee transfer and the escrow. Shows how the local setting, such as regulation, changes the chain choice.
Reasonable (3)	A correct Bahrain or GCC reference is made, but it could be removed without changing the answer.
Limited or Basic (1-2)	No Bahrain or GCC context, or a local fact that is wrong.

C8. Clear communication, sources and submission (weight 8)

What is marked	Both worksheets: how clear your writing is, the length of each answer, your sources, and submission.
Excellent (5)	Both worksheets are submitted. Answers are clear, plain and close to the expected length for each task. Every source you used is listed in Task 4.
Reasonable (3)	Both worksheets are submitted and can be understood. Some answers are far too long or too short, or a source is missing.
Limited or Basic (1-2)	A worksheet is missing, answers are hard to follow, or sources were used but not listed.

Worked example - what a good answer contains

A good answer names the specific data feed, and a concrete control, as the flight-delay worked example does. There, the control is to require two independent providers to agree before the contract pays out.

Check your own work before you submit

- Read the 'Excellent (5)' description for each criterion, then read your answer.
- Give yourself a score from 0 to 5 on each one. Where your score is below 4, add what the description says is missing.
- Check that both worksheets carry your name and student ID, and that Task 4 lists every source you used.
- Submit both worksheets to the Week 4 weekly worksheets link on Moodle by Friday 9 October 2026, 23:59.
