Week 6 Rubric: How Your Worksheets Are Marked

Session 1: Key Articles of Bahrain's Data Protection Law, and the Immutability Problem

Session 2: Ethics, Mapping a Real Product to the Data Protection Law, and Group Formation

IT8204 Blockchain and Cryptocurrency | Assessment 2 (A2), the weekly worksheets | Worth 2.50 percent of the course | Deadline for both worksheets: Friday 23 October 2026, 23:59

How your mark is worked out

- Your two Week 6 worksheets are marked together, on the eight criteria in this rubric.
- Each criterion gets a score from 0 to 5. Decimal scores are allowed, for example 3.5.
- Each criterion has a weight. The eight weights add up to 100.
- Your mark for one criterion is the score divided by 5, times the weight. For example, a score of 4 on a criterion weighted 13 gives 4 divided by 5, times 13 = 10.4 marks.
- Your Week 6 mark is the total of the eight, out of 100. It counts for 2.50 percent of the course, inside your A2 total. The course result is decided on your overall course mark.

What each score means

Score	Level	What it means
0	Missing	No evidence / not attempted.
1	Limited	Attempted but cannot give a basic explanation; mostly incorrect.
2	Basic	Below expectation; major gaps.
3	Reasonable	Meets the task; major enhancement still possible.
4	Very Good	Minor enhancement only; valid and well justified.
5	Excellent	Fully meets the task: every required part present, correct and specific.

A 4 sits between the 'Reasonable (3)' and 'Excellent (5)' descriptions below. A 0 means there is no evidence for that criterion.

BAHRAIN POLYTECHNIC بوليتكنك البحرين

The eight criteria

C1. Session 1, Task 2 - your individual build task (weight 13)

What is marked	Session 1 worksheet, Task 2: a Bahraini exchange wrote know your customer (KYC) data straight onto its chain. A customer now asks for erasure under Personal Data Protection Law (PDPL) Article 23.
Excellent (5)	Gives ONE design change that would let the exchange meet the request. States honestly what the change still does not solve.
Reasonable (3)	Gives a workable design change, but does not say what it still fails to solve, or the change only partly allows erasure.
Limited or Basic (1-2)	No design change, or a change that would not allow erasure of the personal data.

C2. Session 2, Task 2 - your individual build task (weight 13)

What is marked	Session 2 worksheet, Task 2: who, if anyone, is the data controller in a permissionless decentralised finance (DeFi) protocol.
Excellent (5)	Identifies all three candidates - the front-end operator, the decentralised autonomous organisation (DAO) and the developers - and explains why the question is hard to settle.
Reasonable (3)	Names the candidates, but one is missing, or states that the question is hard without explaining why.
Limited or Basic (1-2)	A single answer with no reasoning, or no engagement with the candidates.

C3. Session 1, Task 3 - your own write-up of the group activity (weight 13)

What is marked	Session 1 worksheet, Task 3: your own data design for a Bahraini retail-bank loyalty programme.
Excellent (5)	States what goes on-chain and off-chain, and justifies an erasure mitigation for Article 23. Shows how access control stops data being re-linked to a person, and states the remaining risk honestly.
Reasonable (3)	The design covers most of these four points, but one is missing or stated without a reason.
Limited or Basic (1-2)	A general description with no on-chain and off-chain split, or no erasure mitigation.

C4. Session 2, Task 3 - your own write-up of the group activity (weight 13)

What is marked	Session 2 worksheet, Task 3: your own tension map of Aave or Compound against PDPL Articles 12, 22, 23 and 24, plus your group proposal.
Excellent (5)	Each of the four articles is linked to a specific feature of the product. The controller question is stated, and one unresolved tension is recorded honestly. Your group of four across roles A to D is proposed.
Reasonable (3)	Most articles are mapped, but some links are general, or the unresolved tension is not stated.
Limited or Basic (1-2)	Articles are listed without linking them to the product, or the map is missing.

C5. Task 1 in both worksheets - the reading questions (weight 16)

What is marked	Task 1 in both worksheets. Session 1 asks why immutability clashes with Article 23, and about your chosen mitigation and its limit. Session 2 asks about the controller, the hardest article to satisfy, and the compliance officer's duty.
Excellent (5)	Every question is answered in two or three sentences, in your own words. Each answer is correct and explains why, not only what.
Reasonable (3)	All questions are answered and broadly correct. Some answers are one line, repeat the reading, or skip the reason.
Limited or Basic (1-2)	Several questions are missing or wrong, or the answers are copied from the reading.

C6. Analysis and judgement across the week (weight 14)

What is marked	Across the week: weighing privacy rights against how blockchains work.
Excellent (5)	Admits what a design cannot solve and says why. Weighs competing duties, such as privacy, record-keeping and ethics, and reaches a reasoned position.
Reasonable (3)	Some judgement is shown, but the answers mostly describe, or reasons are stated without support.
Limited or Basic (1-2)	Description only, or opinions given with no reasons.

BAHRAIN POLYTECHNIC بوليتكنك البحرين

C7. Bahrain and Gulf Cooperation Council (GCC) grounding (weight 10)

What is marked	Across the week: accurate use of Bahrain's PDPL.
Excellent (5)	Uses the named PDPL articles accurately and applies them to the Bahraini exchange or bank in the task, rather than in general terms.
Reasonable (3)	A correct Bahrain or GCC reference is made, but it could be removed without changing the answer.
Limited or Basic (1-2)	The PDPL is misquoted, or another country's law is presented as Bahrain's.

C8. Clear communication, sources and submission (weight 8)

What is marked	Both worksheets: how clear your writing is, the length of each answer, your sources, and submission.
Excellent (5)	Both worksheets are submitted. Answers are clear, plain and close to the expected length for each task. Every source you used is listed in Task 4. Listing is what is marked; APA 7th style is advised, not marked.
Reasonable (3)	Both worksheets are submitted and can be understood. Some answers are far too long or too short, or a source is missing.
Limited or Basic (1-2)	A worksheet is missing, answers are hard to follow, or sources were used but not listed.

Worked example - what a good answer contains

A good design says where the data lives, and what the design still does not solve, as the loyalty-programme worked example does. There, the personal data stays off the chain, only a hash goes on it, and the answer says honestly that the pattern of transactions stays visible on the chain.

Check your own work before you submit

- Read the 'Excellent (5)' description for each criterion, then read your answer.
- Give yourself a score from 0 to 5 on each one. Where your score is below 4, add what the description says is missing.
- Check that both worksheets carry your name and student ID, and that Task 4 lists every source you used.
- Submit both worksheets to the Week 6 weekly worksheets link on Moodle by Friday 23 October 2026, 23:59.
